

SALES & REVENUE ANALYSIS DASHBOARD REPORT

Objective

The objective of this project is to analyze sales performance and revenue trends using Power BI. The dashboard provides insights into revenue generation, product performance, regional contributions, and category-wise sales distribution. Interactive visualizations enable users to make data-driven business decisions.

Tools Used :

- Power BI Desktop
- CSV Dataset
- DAX Measures
- Data Visualization Techniques

Key Performance Indicators :

- Total Revenue
- Total Orders
- Average Order Value
- Total Quantity Sold

Insights Generated :

1. The Electronics category generated the highest revenue among all categories. Products such as laptops, mobiles, and monitors significantly contributed to overall sales.
2. Laptops emerged as the top-performing product with the highest revenue contribution. This indicates strong customer demand and profitability within the electronics segment.
3. The North region generated the highest sales revenue, making it the most profitable geographical market in the dataset.
4. Monthly revenue analysis showed a steady upward trend from January to May, indicating positive business growth and increasing customer purchases.
5. Accessories products generated comparatively lower revenue but maintained a consistent sales volume, suggesting stable market demand.
6. Category-wise analysis revealed that Office products contributed moderate revenue, while Electronics dominated overall business performance.

Conclusion :

The Sales & Revenue Analysis Dashboard successfully transforms raw sales data into meaningful business insights. The dashboard helps stakeholders monitor performance, identify profitable products and regions, and support strategic decision-making through interactive visual analytics.
